

PENTAIR

INSPIRED SOLUTIONS FOR A CHANGING WORLD

At Pentair, we envision a future with safe water, abundant energy, and affordable food that protects the health and vitality of our planet and its people. And we're working toward that future around the world.

We provide solutions for the transfer, treatment and monitoring of clean water and wastewater in a variety of applications. We help increase process efficiency, reliability, and overall uptime for our customers.

These solutions have made an impact in places like Kuwait City, where Pentair contributed a desalination solution to one of the world's largest seawater reverse osmosis plants. In New Orleans, Pentair custom-built pumps for what is considered the world's largest flood control pump station.

Put our expertise to work for your next project. **VISIT US AT BOOTH 4935.**
